

PANEL SEQUENCER FOR EDGE BANDERS

The new Panel Sequencer Model ESB increases the productivity of your edgebander right from the start. No human being can maintain the gap between parts on your edgebander to its absolute minimum. Doucet's ESB allows the operator to stage several panels in its bottom feed magazine. Panels are released automatically as soon as the preceding one clears the "no feed zone" on your bander.

The ESB is suitable for feeding panels ranging in size from 10" to 36" long by 4" to 10" wide at up to 100 feet per minute. It comes complete with a variable speed drive photocells and controls that make it a user friendly productivity enhancer.

Power requirement is a 110 v.a.c. 15 amp. service, no compressed air is required.
